

Superstore Sales & Profit Analysis

Portfolio Case Study

Prepared by Disha Rana

Executive Summary

• Analyzed Sample Superstore retail data.
• Built SQL-driven KPIs.
• Designed an interactive Tableau dashboard.
• Generated business recommendations.

Business Problem

- | |
|---|
| • Identify profitable regions. |
| • Measure category & segment performance. |
| • Evaluate discount impact. |
| • Find loss-making products. |

Dataset & Tools

• Dataset: Sample Superstore
• SQL: PostgreSQL
• Visualization: Tableau Public
• Supporting tools: Excel & GitHub

Data Cleaning

- | |
|---------------------------------------|
| • Checked duplicates. |
| • Validated NULL values. |
| • Verified unique customers/products. |
| • Prepared clean analysis dataset. |

Dashboard Components

• KPI Cards: Sales, Profit, Orders, Profit Margin
• Monthly Sales Trend
• Regional Performance
• Category & Segment Analysis
• Discount vs Profit
• Top 10 Loss-Making Products

Key Insights

• Technology had highest sales.
• West region led revenue.
• Consumer segment dominated sales.
• Discounts above 30% hurt profitability.
• Several products consistently generated losses.

Recommendations

• Reduce excessive discounting.
• Review pricing for loss-making products.
• Prioritize profitable regions.
• Track profit margin alongside revenue.

Skills Demonstrated

• SQL
• Tableau
• Business Analytics
• Data Visualization
• Dashboard Design
• Storytelling with Data

Conclusion

- End-to-end analytics project suitable for a Data Analyst portfolio.
- Demonstrates SQL, visualization, and business insight generation.
